

Report Date: April 2, 2026

VanRIMS No.:

[Submit comments to the Board](#)

TO: Park Board Chair and Commissioners
FROM: Director, Park Planning and Development
SUBJECT: Burrard Slopes Park – Concept Plan

RECOMMENDATION

THAT the Vancouver Park Board approve the proposed concept plan for Burrard Slopes Park as described and shown in this report.

PURPOSE AND SUMMARY

The proposed concept plan described in this report is for Burrard Slopes Park, 0.83 hectares of new Permanent Park located between the Fairview and Kitsilano neighborhoods within the Broadway Plan area, on the Arbutus Greenway. The concept is informed by public engagement, City and Park Board policies, and engagement with the xʷməθkʷəy̓əm (Musqueam Indian Band), Sk̓wxwú7mesh Úxwumixw (Squamish Nation), and səliłwətał (Tsleil-Waututh Nation). Staff completed public engagement on the proposed concept in April 2025 and received favourable feedback.

This report shares the project's design concept and seeks a Board decision on the proposed concept plan, which includes new greenspace, 90 new trees, accessible paths, a new dog off leash area, a new 'skateboard/small wheels spot', expanded biodiversity plantings, and a new washroom amongst other features. A decision to approve the concept would advance the project to detailed design.

BOARD AUTHORITY / PREVIOUS DECISIONS

As per the [Vancouver Charter](#), the Park Board has exclusive jurisdiction and control over all areas designated as permanent and temporary parks in the City of Vancouver, including any structures, programs and activities, fees, and improvements or major changes that occur within those parks. The Vancouver Park Board approves major changes in Vancouver parks including the design and development of parks.

CONTEXT AND BACKGROUND

Burrard Slopes Park is located between Fairview and Kitsilano neighbourhoods on the unceded and traditional territories of the xʷməθkʷəy̓əm (Musqueam Indian Band), Sk̓wxwú7mesh Úxwumixw (Squamish Nation), and səliłwətał (Tsleil-Waututh Nation). The park is one of only a few new parks identified for delivery in the Broadway Plan. The final privately owned property was purchased through the Park Land Acquisition program and supported by the Park Board in November 2025. It completed a decades-long assembly program to secure a full block park in an underserved neighbourhood. The proposed design meets Broadway Plan Public Realm Framework Policies, including:

- Keep pace with growth by renewing existing parks for higher intensity use by people of all ages, abilities and cultural backgrounds,
- Complete the phased delivery of parks to meet residents' needs for access to nature, health, wellness and social connectedness, through community-engaged design, and
- Identify opportunities to expand existing park uses and connectivity through integration with road reallocation, greenways and blue green systems.

The park will serve more than 19,500 Fairview and Kitsilano residents living within a 10-minute walk of the site, over 34,500 residents living within a kilometre, as well as all those who visit, work and play here.

As highlighted in VanPlay, the current city-wide park provision target is 1.1 hectares of greenspace per 1,000 residents. Fairview is currently below this benchmark (0.52 ha/1,000 people), and the site is in an Equity Initiative Zone (EIZ). In this context, Burrard Slopes Park helps address a documented access and service level gap while supporting significant planned growth in the Broadway Plan. With the completion of the park, park provision for residents within a 10-minute walk will increase to 0.76 ha/1000 people. (See Appendix B: Context Diagrams.)

During the early planning stage, staff conducted needs assessments to inform the concept plan. The following were identified as high priorities: a skatepark; food and cultural gardens; pollinator gardens; a flexible open lawn; playground accessibility upgrades; stormwater management facilities; accessible pathways; seating and tables; and accessible parking stalls.

DISCUSSION

The following section provides an overview of the concept plan and the considerations that have contributed to its development, broken down as follows:

- Proposed Concept Plan
- City and Park Board Policy alignment
- Engagement Process and Key Findings
- Park Naming and Cultural Expression

Proposed Concept Plan

The proposed concept plan features a central lawn, a skateboard and small-wheels spot, pollinator and rain gardens, a dog off-leash area, a washroom, social spaces, and a network of accessible paths in addition to existing features such as Pine Street Community Gardens, a playground with picnic areas, and the Arbutus Greenway. (See Figure 1: Burrard Slopes Park Proposed Concept Plan)

Figure 1: Burrard Slopes Proposed Concept Plan

Key features are further described below:

Central Lawn

A large, level lawn at the heart of the park supports a range of activities from day-to-day socializing for 20 - 30 people and hosting small events for 50 - 100 people to occasional large events up to 1500 people if desired. The shaded and gently sloping hill along the lawn's north edge invites people to gather and observe the park activities and buffers the lawn from the skate area. Dense tree planting along the lawn's south edge screens it from the Arbutus Greenway.

Skateboard and Small-Wheels Spot

The 'skatepark' naming convention has been changed to 'skateboard and small-wheels spot' to align with Skateboard Amenities Strategy typologies based on the area's smaller square footage in the revised plan. Its features are accessible to a range of user types (i.e. skateboards, BMX bikes, roller and inline skating and scootering) and abilities. The location at the north side of the park and a treed hill to the spot's south provide separation and sound attenuation from residences on West 6th Ave. Dense tree planting on the spot's east and west creates further visual buffer. Direct entrances to this area will minimize congestion and improve circulation.

Playground

The playground expansion offers a variety of play features to encourage motor skills and help with social and emotional development in children of different ages and abilities. The added playground area will have accessible surfacing, three new play features, and a circuit pathway.

Dog Off-Leash Area

The expanded dog off-leash area supports the current and future needs for dog owners in this densifying neighborhood, while promoting that dogs remain on-leash in the rest of the park. The location was carefully chosen, and a vegetation buffer was added to separate the off-leash area from other park activities, especially quiet spaces. Accessible pathways and benches make the area welcoming for all dog owners and provide a place to socialize.

Pollinator Gardens and Rain Gardens

Pollinator gardens are the key feature of the western park edge. A diverse selection of native and adapted flowers and grasses will provide seasonal interest, habitat, sensory interest, and a place for respite. Rain gardens with similar plant species will offer continuous environmental and social benefits while capturing rainwater from the park and adjacent streets.

Washroom

A new accessible washroom near the play and fitness areas will serve park goers and people walking, cycling, and rolling through the area including Arbutus Greenway users.

Social Spaces

Seating and gathering areas throughout the park, including a community table and multipurpose mini plaza, offer accessible places to observe activities, gather or relax and help foster social connectedness. Seating and tables under the tree canopy and within the pollinator gardens offer tranquil retreats for small groups or individuals. The inclusion of a mini plaza for small community events responds to feedback from Civic Agencies and public engagement.

Active Transportation Upgrades

The collaborated efforts between Park Board and Engineering Departments will deliver seamless integration between the park and surrounding active transportation projects. The following upgrades will be delivered concurrently with the park construction:

- Separating Arbutus Greenway walking and cycling lanes as well as widening paths to meet future needs.
- Extending green space on Pine St will include street trees, rain gardens and shared micromobility stations.

Above mentioned upgrades and completion of the park contribute to the major active transportation network including the Arbutus Greenway, Seaside Greenway Connection, and Granville Bridge Connector. Accessibility and safety improvements include accessible street parking and pedestrian crossing upgrades at Fir and 6th. A temporary bike path through the park safely links the Arbutus Greenway and the Granville Connector, and will be replaced with a permanent bike connection on Fir Street before park construction starts.

Enhanced Tree Canopy

The concept plan proposes over 90 new deciduous and evergreen trees, creating diverse habitat, defining activity spaces, and providing shade. This supports the Urban Forest Strategy's goal to achieve 30% urban forest canopy by 2050, enhancing access to nature and supporting health and wellness in this canopy deficient neighbourhood. The proposed planting prioritizes native vegetation from the Local First Nations' culturally significant plant lists to support ecosystem functioning, as well as climate adapted species to support climate resilience.

City and Park Board Policy Alignment

The proposed concept for Burrard Slopes Park is supported by principles outlined in the following plans and strategies. For descriptions and relationship to Burrard Slopes Park, see Appendix A: City and Park Board Policy Alignment.

- [Seaside Greenway Connection](#)
- [Granville Connector](#)
- [Green Rainwater Infrastructure](#)
- [Washroom Priority Locations & Fieldhouse Strategy Update](#)

Engagement Process and Key Findings

Public Engagement - Scope

Staff conducted two rounds of public engagement in September to October 2023 and April 2025. The first round focused on understanding how people use the current space and identified values and priorities for the future park. The second round sought feedback on the draft concept plan. Across both rounds, we received over 75,000 webpage visits (more than 13,000 in Round 1 and more than 62,000 in Round 2) and 1,917 survey responses (875 in Round 1 and 1,042 in Round 2).

In Round 2, over 80% of respondents supported the overall park concept plan; nearly 85% felt the design will meet the needs of the community for a welcoming and safe park.

Public Engagement - Findings

The following were some common themes heard during the engagement, and how staff intend to address these as the project proceeds:

Skatepark: 44% responded that the skatepark (which aligns with the Skateboard Amenities Strategy) will meet the needs of the community, and 29% said it will not. The main area of concern was sound with some it based on the large areas of concrete. Feedback guided design refinements including reducing the size of the skatepark, shifting it further east and adjusting the configuration and site grading. Additional refinements include the introduction of a landscape berm to act as a visual buffer, while maintaining function. Lastly, staff conducted an acoustic study which confirmed sound levels from the skateboard facility are anticipated to be comparable with existing sounds in the vicinity.

Washroom: The washroom was the third most popular feature in the draft concept plan, while some safety concerns were reported. Staff will ensure that safety features meet Parks Washroom Strategy and Public Washroom Design & Technical Guidelines at a later phase of the project.

Dog Off-Leash Area: The completion of dog off-leash areas (OLAs) at Granville and Heather parks were delivered as priority outcomes of the People, Parks and Dogs Strategy, and the proposed design responds to a clear need for an OLA identified in Round 1 engagement. The draft concept shown in Round 2 presented an OLA at 466 square meters, reflecting the site capacity at that time. Engagement feedback identified interest in a larger off leash area. The final design uses the recently acquired area to expand the OLA to 646 sq. m.

A summary of public engagement is provided in Appendix E - Engagement Summary. For the full engagement summary reports see the [Burrard Slopes Park Shape Your City](#) project page.

Interest Holders, Adjacent Businesses, and Civic Agencies Engagement

Over 20 local neighbourhood organizations identified as interest holders were offered in-person and online meetings, with information shared at key milestones. Staff also handed letters to businesses adjacent to the park to inform them of project updates. Engagement with seven Civic Agencies identified the need for a small event space, social spaces, and accessible parking spots, all of which have been incorporated into the concept plan. (See Appendix D: Affiliations.)

Engagement with Musqueam Indian Band, Squamish Nation, and Tsleil-Waututh Nation

Engagement with the local First Nations was initiated through the inter-governmental referral process from the beginning of the project in 2020, and continued throughout with ongoing updates, discussions, and meetings. They provided significant input, which yielded the following key directions:

- Incorporate culturally significant and climate adaptive plants to honour the local First Nations' relationship with the land;
- Provide cultural visibility to create a sense of belonging, presence and acknowledgement and to share stories through art;
- Provide equal opportunities for all three Nations;
- Integrate hə́ŋqəmiṇəṁ and Skwxwú7mesh sníchim languages into the design through interpretive signage to bring the local Nations into the present; and
- Conduct archaeological protocols.

Park Naming and Cultural Expression

The project area is currently called Burrard Slopes Park; however, an official park name will be identified through a separate engagement process, which will be guided by a forthcoming update to the Park Naming Policy.

Staff are committed to working collaboratively with xʷməθkʷəy̓əm (Musqueam Indian Band), Sk̓wxwú7mesh Úxwumixw (Squamish Nation), and səliłwətał (Tsleil-Waututh Nation). Cultural expression within the park will be developed in consultation with knowledge holders and artists from the local Nations, ensuring that the park reflects and supports indigenous cultural visibility that is both locally grounded and emergent from the significance of the site.

FINANCIAL CONSIDERATIONS

The estimated design and construction cost for Burrard Slopes Park is \$13.1M including project management costs, cost escalation, contingencies, and capacity funding to support the Local First Nations to integrate cultural expression, including park naming. The construction cost has been validated by an independent cost consultant. This project is entirely eligible for DCL funding and \$4.3M is allocated in the 2019-2022 and 2023-2026 Capital Plans.

Design and construction of the Arbutus Greenway and Pine St upgrades and associated green infrastructure will be funded through Engineering capital funding.

A funding ask will be made for the 2027-2030 Capital Plan for \$8.8M for construction costs, with additional funding for the washroom sought through the Washroom Program capital funding.

The total estimated cost of the project including land acquisitions dating back to the 1980s is \$69.2M, as detailed below, underscoring the decades of effort culminating in this major new park:

	Estimated Costs (\$M)
Building Deconstruction	\$3.0
Soft Costs*	\$4.3
Construction	\$8.8
Estimated Project Plan and Build	\$16.1
Completed Park Board Land	
Acquisition Costs	\$53.1

**Soft costs, also known as indirect costs, include all costs related to design, engineering, site investigations, archeology, contract documents, permitting, insurance, temporary greening, interim maintenance, project management and consultation.*

The initial estimate for the operating impact to capital budget is 5% of the project's construction cost or ~\$400K, starting in 2031 (phase 1 construction is targeted to complete in 2029 under a two-year maintenance contract with the contractor). Estimates for both capital and operating costs will be refined at key stages of detailed design. Operating funds will be requested as a part of the 2031 operating budget.

OTHER CONSIDERATIONS

Arbutus Greenway and Pine Street Implementation

Staff are considering possible efficiencies in bundling consultancy and construction contracts for Burrard Slopes Park with City of Vancouver Arbutus Greenway and Pine St upgrades including associated green infrastructure. This approach may reduce scheduling risks and construction impacts and result in cost savings.

Two-phase construction

Construction of the park will proceed in two phases due to the recent acquisition of the property at 1606 West 5th Avenue. Most of the park design will be constructed during Phase 1. The pathway connecting the corner of Fir Street and West 5th Avenue, along with the dog off-leash area, will be constructed in Phase 2 following the completion of soil contamination assessments and the demolition of existing structures.

CONCLUSION AND NEXT STEPS

Subject to the Board's decision on the recommendation outlined in this report, detail design for Burrard Slopes Park will begin in Q2 2026, initiated through a public Request for Proposals to select a technical design team to prepare construction ready tender documents. Construction is expected in two phases with Phase 1 construction targeted from Q4 2027 to Q2 2029 for partial opening, and Phase 2 construction from Q4 2029 to Q3 2030 to complete the park.

Burrard Slopes Park will provide much needed green space. The proposed concept plan is designed to be inclusive and ecologically healthy, embracing the vision for parks articulated in City and Park Board policies. It responds to the input from the local Nations and is broadly supported by the community.

Staff recommend the Vancouver Park Board approve the proposed concept plan for Burrard Slopes Park so the project can proceed to detail design and construction.

APPENDIX A

City and Park Board Policy Alignment

[VanPlay \(2019/2020\)](#): The Parks and Recreation Services Master Plan supports the pursuit of equity, connectivity, and access to parks and recreation for all. The Burrard Slopes Park project aligns with the VanPlay Direction “Grow and Renew Parks and Recreation Assets: to keep pace with population growth and evolving needs” by expanding parklands to provide much needed public green space and recreational amenities at the former industrial site. The project also aligns with the VanPlay Direction “Welcome Everyone: parks and recreation experiences that improve quality of life” by creating a space where people of all ages, abilities, and identities can gather to relax, enjoy nature, socialize, and recreate.

[Broadway Plan \(updated 2024\)](#): The 30-year plan will focus on opportunities to integrate housing, jobs, and amenities (including parks, arts and culture, community gardens) around the new Broadway Subway. The public benefit strategy directions include “develop and deliver planned new park spaces, such as Burrard Slopes Park”.

[Broadway Public Realm Plan \(2024\)](#): Outlines the overall vision and guiding directions for the public realm in the Broadway Plan area.

[Arbutus Greenway Design Vision \(2018\)](#): Walking and cycling pathways and future streetcar accommodation on former CPR line. The Burrard Slopes Park project aligns with the “Harvest Table” character zone to offer places for people to socialize and picnic.

[Vancouver Skateboard Amenities Strategy \(2022\)](#): Sets out a vision to provide a network of welcoming skate amenities that serve a thriving and diverse community and strives to address service gaps throughout the city. The Strategy’s phase I implementation plan recommends a new skateboard amenity in the Kitsilano district, which includes Fairview and Kitsilano neighbourhoods.

[Rain City Strategy \(2019\)](#): Reimagines and transforms how the City manages rainwater to improve water quality, resilience, and livability by creating healthy, urban ecosystems across Vancouver. Burrard Slopes Park is situated within a watershed that has been recognized as a priority area to reduce stormwater volume, increase water quality, and increase tree cover and vegetation.

[Urban Forest Strategy \(Updated 2025\)](#): Sets goals, targets, and actions to protect and enhance Vancouver’s urban forest. The Burrard Slopes Park site is identified as a low tree equity zone with 21% (Fairview) and 28% (Kitsilano) canopy coverage, which is below the target of 30% canopy cover by 2050.

[Biodiversity Strategy \(2016\)](#): Supports the increase in amount and quality of Vancouver’s natural areas to support biodiversity and access to nature.

[Parks Washroom Strategy \(2020\)](#): Suggests size and type of washroom based on park classification. Burrard Slopes Park is identified as one of the priority washroom locations in [the Washroom Priority Locations & Fieldhouse Strategy Update \(2024\)](#).

[People, Parks and Dogs - A Strategy for Sharing Vancouver Parks \(2017\)](#): Data-driven policy to deliver well planned and designed parks for park users with and without dogs for the next

10 years. The assessment identifies Kitsilano as one of the highest priority neighbourhoods for a new or enhanced dog off-leash area.

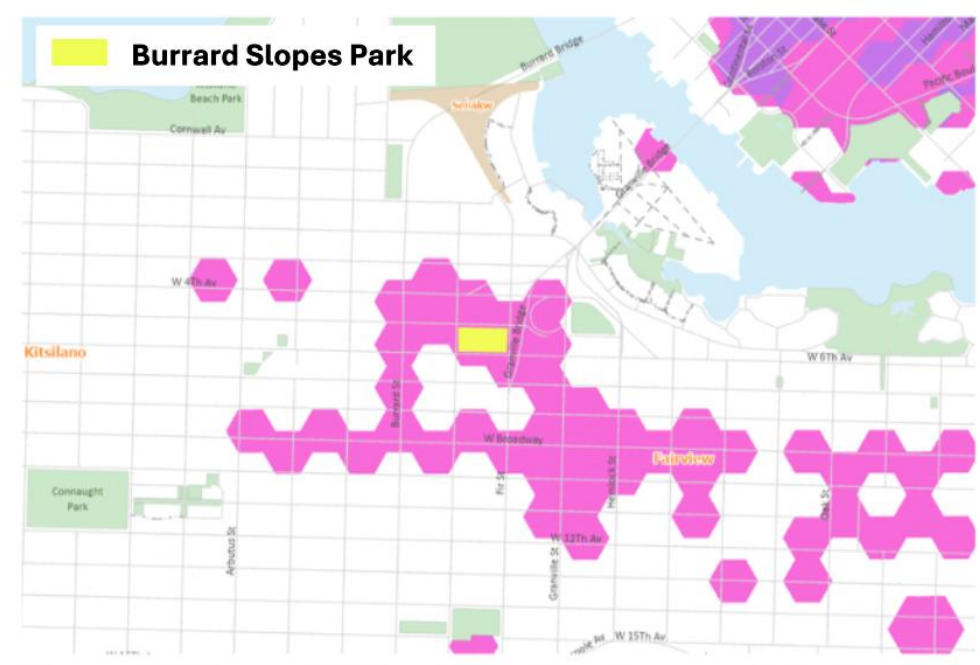

Figure 4: VanPlay Equity Initiative Zones: Tree Canopy and Park Access Gaps

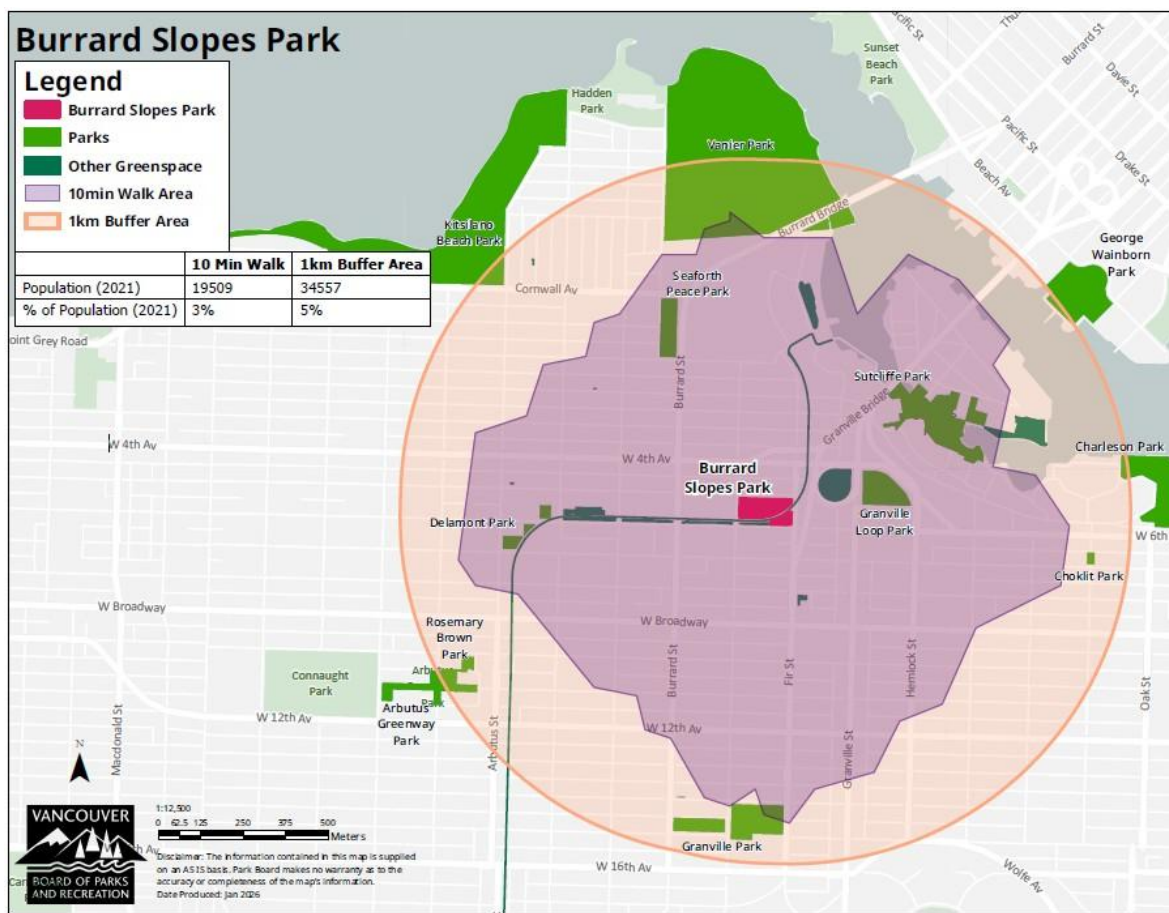

Figure 5: Parks within a 10-minute Walk of Burrard Slopes Park

APPENDIX C

City of Vancouver and Park Board Services Initiatives

- [Arbutus Greenway](#): Walking, cycling and rolling experiences on the Arbutus Greenway between Pine and Fir streets will be upgraded to reflect the Arbutus Greenway Vision. The upgrades between will align with park delivery.
- [Seaside Greenway Connection](#): The Pine St cycling connection between the Arbutus Greenway and the Seaside Greenway became the preferred route and a priority for implementation in 2018. A park-like design on Pine St between West 5th and 6th Aves will be implemented to align with the park delivery.
- [Granville Connector](#): A safe cycling connection between the 2025 Granville Connector and the north terminus of the Arbutus Greenway will be created at West 5th Ave and Fir St. When park construction starts, this connection will replace the temporary bike lane located within the Burrard Slopes Park site.
- [Green Rainwater Infrastructure](#): Rainwater management is integrated at the surface along the north side of the Arbutus Greenway and east of the skatepark, including Pine St and Fir St. In addition to managing on-site rainwater to meet [Rain City Strategy](#) standards for parks, the design manages runoff from adjacent roadways where possible, as part of the blue-green system network identified in the Broadway Plan.
- [Washroom Priority Locations & Fieldhouse Strategy Update](#): Burrard Slopes Park is identified as one of the priority sites for new washrooms in the 2024 Board briefing memo describing updates to the Parks Washroom Strategy.

Engagement Summary – Round 1

Figure 8: Round 1 Engagement Activities and Feedback Summary

Engagement Summary – Round 2

What we did

From April 9-30, 2025, the Park Board sought input from local residents, business owners and users of the park about their **opinions on the draft concept plan for the park**. This engagement took place through a virtual survey and in person at a pop-up event within the park.

The public was notified of the engagement process by email, media/social media, postcards and site signage.

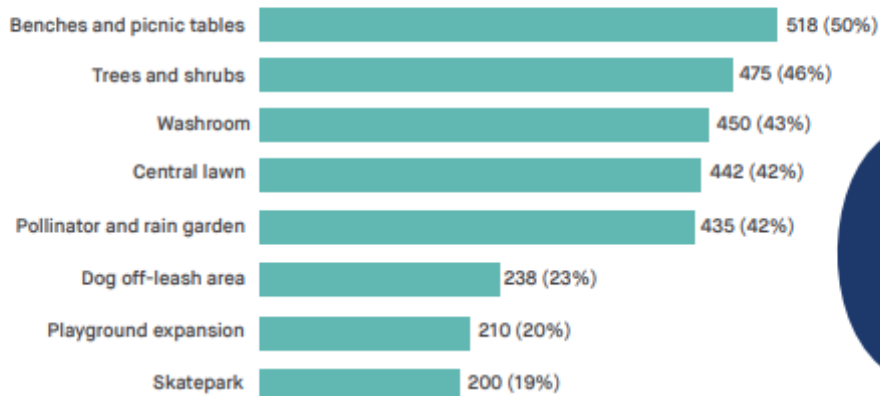

Input from this round of engagement will help us shape the final concept plan for the park.

Figure 9: Round 2 Engagement Activities Summary and Draft Concept Plan

What we heard

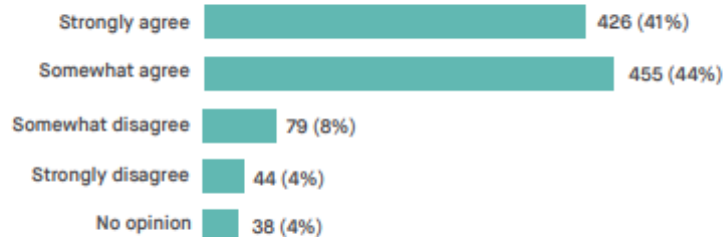

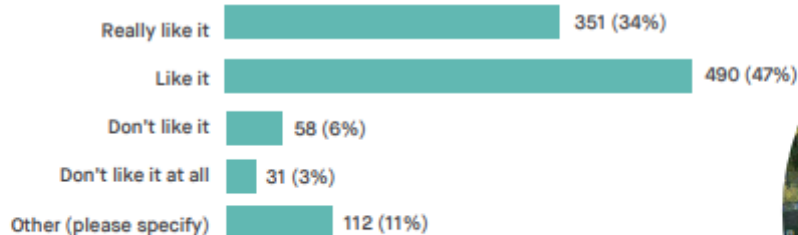

About the proposed park plan

**ONLINE
SURVEY
RESULTS**
Q:
What features do you like the most in this concept? Please select your top three (3):

"Far too many dogs with no proper place to play. Many let them off-leash in the garden area. They need a nice large area."

Key takeaway

A majority of people (81%) like the park concept design, especially the seating areas and green spaces.

Q:
Do you think the design will meet the community need for a welcoming and safe park?
**Q:**
What do you think of the overall park concept design?

6 Burrard Slopes Park
What we heard report | Spring 2025

Figure 10: Round 2 Engagement Feedback on Proposed Park Plan Pt. 1

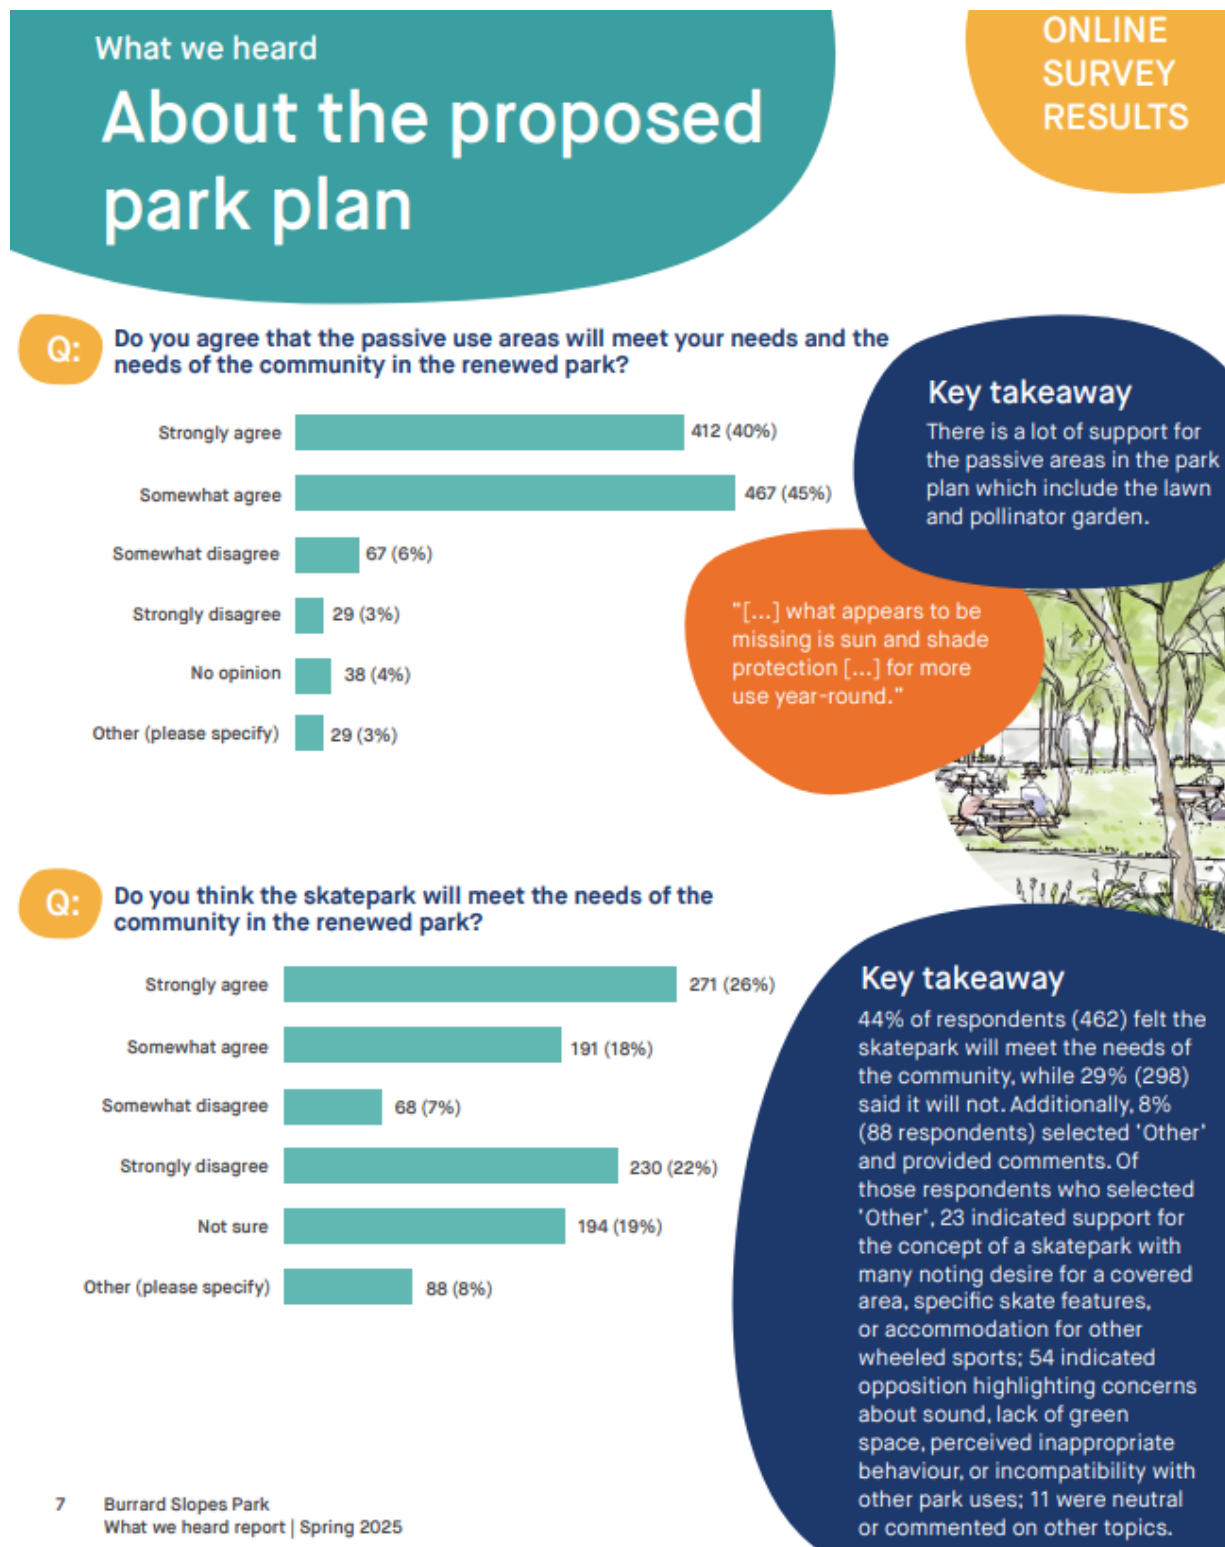

Figure 11: Round 2 Engagement Feedback Summary - Proposed Park Plan Pt.2

What we heard

About the playground expansion

ONLINE SURVEY RESULTS

We shared two layout options for the proposed playground expansion. Both options include new trees for shade.

Option 1 includes two new play features and retains a small portion of the existing lawn.

Option 2 includes three new play features and a circuit for wheeling. No significant lawn area is retained in this option.

Key takeaway

Survey responses were nearly evenly split, with slightly more support for Option 2. This suggests a modest preference for more play features and reduced lawn space.

Q: Which playground layout do you like better?

Option 1 375 (36%)

— play area expansion

Like them both equally 221 (21%)

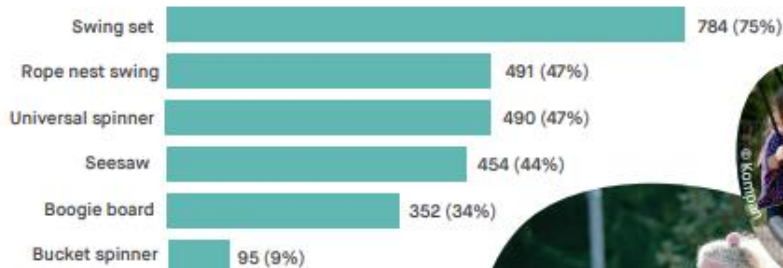

Other (please specify) 49 (5%)

Option 2 397 (38%)

--- trike circuit

Q: Which type(s) of new play equipment would you most like to see in the new playground expansion area? Please select up to three (3):

Key takeaway

The most desired play features are swings, a spinner and a seesaw.
